

AQUATARP

Product Description:

AquaTarp is a solvent-free, water and surfactant based dispersion of styrene copolymer latex specifically formulated to provide enhanced soil binding and dust suppression properties. When used as a spray-on solution it will bind fine particles together and reduce dust emissions and material loss on stockpiles, dumps, rail wagons and other exposed surfaces. For optimal results it can also be established into the wearing course layer of a road, laydown or hardstand area to provide stabilisation and water-proofing of the surface.

Application Details:

AquaTarp is delivered in a concentrated liquid form ready to use. It is diluted to a concentration of 2.5% to 20% depending upon the specific requirement, work being performed, material properties, climatic conditions and other factors.

Benefits:

- Reduced material loss, dust levels and road/ground maintenance.
- Less water ingress into base materials and faster surface drying times.
- Forms a stable anti-skid and water repelling ground surface.
- Increased road/ground strength when used as a stabilising agent.
- Reduced watering of surfaces for dust control thus saving on fleet operating costs.
- Easy to apply, no specialised equipment required.
- Environmentally friendly, non-toxic and non-hazardous.

Physical and Chemical Properties:

Solids Content	>48%
pH	8 – 10

Package Information:

AquaTarp is available in 1,000 litre IBCs and bulk delivery.
